No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                       with prostate stem cell antigen (PSCA) by administering an antibody which selectively binds to PSCA and inhibits the growth of the cancer cells. The PSCA gene is found on human chromosome 8Q24.2. The invention provides the human and murine PSCA protein and coding sequences, which can be used not only in the treatment of, but also in detection and prognosis of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention is concerned with producing scaffold proteins based upon the human CTLA-4 SCA domain. These scaffold proteins can be used as a scaffold to bind antigen- or receptor-binding fragments. These can be used in the treatment of diseases such as cancer, atherosclerosis, thrombosis, osteoporosis, rheumatoid arthritis and diabetic retinopathy. Sequences AAB22930-B29939 were used in the production of the proteins of the invention.
                                                             present invention describes a method of treating cancer associated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         useful as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human, CTLA-4; scaffold protein; antigen-binding; receptor-binding; SCA domain; cancer; thrombosis; osteoporosis, rheumatoid arthritis; diabetic retinopathy; atherosclerosis.

Sequences AAY40680-Y40703 are functionally equivalent derivatives of the A3 peptide (AAY40605) which forms part of a beta sheet. Peptides CC A3 peptide (AAY40605) which forms part of a beta sheet. Peptides CC (AAY40601-Y40609) together form a shighe-chain scaffold protein which contains at least 1 disulfide bond, contains less than 10% alpha helix and contains at least 1 disulfide bond, contains less than 10% alpha helix CC and contains at least 8 le
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New scaffold protein, useful for stabilizing antigens used as vaccines
                                                                                                                                                                                                                                                                                                                                                    Scaffold protein; beta strand; beta sheet; stabilize antigen; vaccine;
                                                                                                                                                                                                                                                                                                   A3 derivative #15, beta strand of scaffold protein structure.

This invention describes a novel method for the detection of a mammalian infection by an acid-resistant microorganism (A) by treating a facel sample with at least two different monoclonal antibodies (MAD) (or their fragments or derivatives) or aptamers (collectively (I)) and detecting formation of a complex (C) between (I) and the corresponding antigen of (A). The first and second (II) bind to epitopes of different antigens (Ag). These epitopes are present, after passage through the intestines, in at least some mammals, and have either: (I) their native structure; or (II) a structure against which an antibody is produced by an animal infected or immunized with (A), or its extract, lysate, derived protein or fragment, or with a synthetic peptide. Practically all mammals display infection by acid-fast bacteria, particularly of the genera Helicobacter, Mycobacterium and Campylobacter, apecifically H. Pylori, H. hepaticus, therapeutically. The method is direct and non-invasive, and provides an inexpensive and easily standardizable diagnosis, despite possible degradation of antigens during passage through the intestines. This sequence represents a fragment of a H. Pylori 26 kDa protein-binding antibody heavy chain complementarity determining region CDR2 which is used to illustrate the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Detecting infection by acid-fast microbes for diagnosis of Helicobacter pylori, comprises reacting a faecal sample with two binding reagents for antigens that survive intestinal passage -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Mouse mAb 1D9 antibody heavy chain complementarity determining region 2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    An antigen/antibody specificity exchanger comprises an antibody-derived amino acid sequence (A) which specifically binds to a particular antigen, linked to an amino acid sequence (C) to which example of a type (A) sequence; it is the CDR2 sequence is a preferred heavy chain of monoclonal antibody C1.5. Preferred type (C) sequences are the antibody binding regions from viruses or other pathogens. The specificity exchanger can redirect antibodies already present in a patient and raised against a particular antigen, to fight a different antigen. For example, it was shown that anti-poliovirus antibodies could be redirected to fight HIV.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

The invention comprises a method of inhibiting graft rejection, graft versus host disease or chronic rejection of a transplanted graft. The method involves administering an antagonist of CC chemokine receptor 2 (CCR2) and optionally an immunosuppressive agent. The CCR2 antagonist may be an anti-CCR2 antibody (i.e. containing light and heavy chain complementarity determining regions from various non-human origins). CCR2 is known to be involved in the rejection of transplanted grafts. The method of the invention is useful for inhibiting graft rejection particularly allografts such as kidney, liver, lung, heart-lung, particularly allografts such as kidney, liver, lung, heart-lung, inhibiting graft versus host disease and for inhibiting chronic rejection of a transplanted graft. The present amino acid sequence represents a mouse mAb 1D9 antibody heavy chain complementarity determining region 2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Monoclonal antibody, MAb, lipoteichoic acid; gram positive, bacteria, immunoglobulin; phagocytosis; infection; epitope; peptide mimic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

The present invention relates to a phage display library of variable heavy domain (VHH or VH) fragments (sdab fragments) derived from liama antibodies. The library is useful for in vitro selection against any antigen of interest as a target. Single domain anti-idiotypic antibody fragments are isolated from the library using phage display technology and an antibody serving as an antigen. Such anti-idiotypic antibody fragments have great potential in evoking the immune system response to pathological antigens and in vaccine development. The large size of the library considerably increases the probability of isolating from it antigen-binding fragments having high affinity to almost any predetermined target (antigen of interest). The library eliminates the development of anti-idiotypic antibodies by immunisation and allows isolation of anti-idiotypic antibodies by immunisation and allows the llama heavy chain domain fragments of the invention.
                                                                                                                                         New phage display library of variable heavy domain antigen-binding fragments derived from llama antibodies, useful for in vitro selection against any antigen of interest as a target
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           H-CDR-2 of anti-idiotype antibody against human anticancer antibody.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel anti-idiotype antibody against an human anticancer monoclonal antibody - and DNA sequences encoding the antibody, useful in pharmacology, medicine and biochemical fields.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         A new anti-idiotype antibody against a human anticancer monoconal antibody is claimed. This antibody contains in its heavy chain 3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Antibody; cancer; CDR; heavy chain; light chain; immunoglobulin; complementarity determining region.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              53.1%; Score 52; DB 23; Length 17; 58.8%; Pred. No. 0.058;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a monoclonal antibody (MAb) to lipoteichoic acid of gram positive bacteria, where the MAb is a chimeric immunoglobulin comprising at least part of a human immunoglobulin variable immunoglobulin comprising at least part of a human immunoglobulin variable region having specificity to lipoteichoic acid of gram positive bacteria. The antibodies bind to whole bacteria and enhance phagocytosis and killing of the bacteria and enhance protection from lethal infection. The antibodies or peptides (encoded by a DNA of the variable region of anti-lipoteichoic acid antibody or characterised by amino acids anti-lipoteichoic acid antibody or characterised by amino acids corresponding to one or more of the complementarity determining regions (CDRs) of the variable region of the antibody) can be used for treating or preventing infections caused by gram positive bacteria. They can also be used for the diagnosis of gram positive bacterial infections.

Sequences AAW94735-39 represent heavy chain variable regions of the anti-lipoteichoic antibody 96-100.

complemetarity determining regions CDR1 (AAR74929-R74931), CDR2 (AAR74932-R79932-R794931), this is also true of the light chain which has its own CDR1 (AAR74944-R74946 and AAR85774), CDR2 (AAR74947-R74949) and CDR3 (AAR74954). The antibody and DNA encoding it are useful in pharmacological, medical and biochemical fields.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Preparing immunoglobulin binding protein array in plant cells by transforming the cells with different polynuclectides encoding binding protein polypeptides specific to ligand, selecting plant cells for preparing array

The invention relates to transforming a population of cells (e.g. plant cells), comprising using a library of two different polynucleotides encoding different immunoglobulin binding protein (198P) polyrpeptides that specifically bind to a ligand or form one or more disulphide bonds with polypeptides in transferded cells, to generate an ISBP that binds to a ligand, and transformed plant cells are selected, and preparing an ISBP array in plant cells. At least one peptide sequence low, ISB sequence identity to a framework region (FR) of a native ISB, ISB, ISB, Kappa or lambda immunoglobulin molecule. The machod is useful for preparing an immunoglobulin binding protein calls especially plant cells (e.g. Agrobacterium tumefaciens or maize) or other eukaryotic cells (e.g. insect cells or mammalian cells). The CHBP is useful for preparing cells or mammalian cells). The chart eukaryotic cells (e.g. insect cells or mammalian cells). The immunoglobulin derived peptide that may be incorporated into an ISBP of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ô

The present invention is concerned with producing scaffold proteins based upon the human CTLA-4 SCA domain. These scaffold proteins can be used as a scaffold to bind antigen- or receptor-binding fragments. These can be used in the treatment of diseases such as cancer, atherosclerosis, thrombosis, osteoporosis, rheumatoid arthritis and diabetic retinopathy. Sequences AAB29930-B29939 were used in the production of the proteins of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Complementarity determining region 2; Campath-1; Campath-1H; antibody; lymphoma; CD52 antigen; loop 2; immunological tolerance; minimal mutant; antibody therapy; antiglobulin response; heavy chain; CDR.
                                                                                                                                                                                                                                                                             Scaffold composed of single-chain polypeptide having beta sandwich architecture carrying new and randomized peptide sequences useful as supporting framework and carrying antigen- or receptor binding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              /label= K7D

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    A new anti-idiotype antibody against a human anticancer monoconal antibody is claimed. This antibody contains in its heavy chain 3 complemetarity determining regions CDR1 (AAR74929-R74911), CDR2 (AAR74932-R794935) and CDR3 (AAR74936-R74939), this is also true of the light chain which has its own CDR1 (AAR74944-R74946 and AAR8774), CDR2 (AAR74947-R74949) and CDR3 (AAR74954). The antibody and DNA encoding it are useful in pharmacological, medical and biochemical
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                             H-CDR-2 of anti-idiotype antibody against human anticancer antibody.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human, CTLA-4; scaffold protein; antigen-binding; receptor-binding;
SCA domain; cancer; thrombosis; osteoporosis, rheumatoid arthritis;
diabetic retinopathy; atherosclerosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel anti-idiotype antibody against an human anticancer monoclonal antibody - and DNA sequences encoding the antibody, useful in pharmacology, medicine and biochemical fields.
                                                                                                                                                                                                                                                                               Antibody; cancer; CDR; heavy chain; light chain; immunoglobulin; complementarity determining region.

Tone M, Waldmann H, Walsh L;

Gilliland LK,

Modified therapeutic antibody having reduced affinity for its antigen - can induce immunological tolerance, e.g. to Campath-1 monoclonal antibodies used in antibody therapy of lymphoma and WPI; 1997-435093/40. Frewin MR, 

complementarity determining (CDR) region 2 of the humanised antibody campath-1. Campath-1H. Campath-1H heavy chain sequence encodes human complementarity determining (CDR) regions 2 of the humanised antibody campath-1H. Campath-1H heavy chain sequence encodes human is protein at all positions, except the 3 CDR regions. Campath-1 antibodies have been used to induce remissions in lymphoma and leukemia patients and for the treatment of rheumatoid arthritis and vasculitis. The target antigen is CDS2, which is a GPI-anchored cell-surface glycoprotein of lymphocytes and monocytes. Loop 2, represented by residues 4-9 of the present sequence, is important for binding to CDS2. Mutations were made within this region so as to abolish binding of the antibody to CDS2, within this region so as to abolish binding of the antibody to CDS2, which reduces affinity for the antigen, and induces immunological tolerance. The present mutant contains a single charge difference from Lys to Asp. The positive charge of Lys is thought to interact with the the papel and this alphale mutation may destroy antigen binding. Antibody therapy is often limited by an anti-antibody (antiglobulin) response preventing retreatment with the antibody. The minimal mutants or patients may be used to induce tolerance to the therapeutic antibody in patients. They can also be used in the manufacture of medicines for induction of tolerance. Peptides AAW23390-95 represent "minimal" mutant sequences of the Claim 12; Fig 1; 43pp; English. 19 AA; leukaemia Sequence

Sequence 98, Application US/09968561A

Patent No. US20020164642A1

GENERAL INFORMATION:

APPLICANT: Tomlineon, Ian M

APPLICANT: Winter, Gregory

TITLE OF INVENTION: Method to Screen Phage Display Libraries with Different Ligands

FILE REFERENCE: 3003-10.3B

CURRENT PLICATION NUMBER: US/09/968,561A

FRIOR FILING DATE: 1997-11-0.0

PRIOR FILING DATE: 1997-11-13

PRIOR FILING DATE: 1997-11-21

PRIOR FILING DATE: 1997-11-21

PRIOR FILING DATE: 1997-11-21

PRIOR FILING DATE: 1997-11-20

PRIOR PLICATION NUMBER: US 60/066,729

Sequence 8, Application US/09968561A

Patent No. US20020164642A1

GENERAL INFORMATION:

APPLICANT: Tomlinson, Ian M

APPLICANT: Tomlinson, Ian M

APPLICANT: Winter, Gregory

TITLE OF INVENTION: Method to Screen Phage Display Libraries with Different Ligands

FILE REFERENCE: 8039/1073B

CURRENT APPLICATION NUMBER: US/09/968,561A

CURRENT PELING DATE: 1997-10-20

PRIOR FILING DATE: 1997-11-3

PRIOR FILING DATE: 1997-11-3

PRIOR APPLICATION NUMBER: US 60/066,729

PRIOR APPLICATION NUMBER: US 60/066,739

NUMBER OF SEQ ID NOS: 350

NUMBER OF SEQ ID NOS: 350

NUMBER OF SEQ ID NOS: 350

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                 April 22, 2003, 13:47:08 ; Search time 14 Seconds (without alignments) 39.931 Million cell updates/sec
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 4,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 78

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 6, Application US/08318970B

Sequence 6, Application US/08318970B

Patent No. 5589573

GENERAL INFORMATION:

APPLICANT: Hideaki HAGIWARA, et al.

APPLICANT: Hideaki HAGIWARA, et al.

TITLE OF INVENTION: ANTIBODIES AGAINST ANTI-IDIOTYPIC

TITLE OF INVENTION: AND DNA BASE SEQUENCES HUMAN MONOCLONAL

TITLE OF INVENTION: AND DNA BASE SEQUENCES ENCODING THOSE SEQUENCES

NUMBER OF SEQUENCES: 48

CORRESPONDENCE ADDRESS:

ADDRESSEE: Law Office of Sherman and Shalloway

STREET: Alaxandria

STATE: Virginia

STATE: Virginia

COUNTRY: USA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

JOS-264-02 22, Application US/08264093

Sequence 22, Application US/08264093

Patent No. 5639863

GENERAL INFORMATION:

APPLICANT: Michael D. Dan

TITLE OF INVENTION: HUWAN MONOCLONAL ANTIBODIES SPECIFIC TO

TITLE OF INVENTION: CELL CYCLE-INDEPENDENT GLIOMA SURFACE

TITLE OF INVENTION: ANTIGEN

NUMBER OF SEQUENCES: 26

CORRESONDENCE ADDRESS:

ADDRESSEE: Ridout & Maybee

STREET: 2300 Richmond-Adelaide Centre

STREET: 101 Richmond Street West

CITY: Toronto

STATE: Ontario

COUNTRY: Canada

ZIP: MSH 2J7

COMPUTER: BADABLE FORM:

MEDIUM TYPE: Diskette - 3.5 inch, 1.4 Mb storage

COMPUTER: ASSTEM MS-DOS 6.00

SOFTWARE: ASCII Editor

CURRENT APPLICATION NUMBER: US/08/264,093
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Length 19;

Patent No. 6268488

GENERAL INFORMATION:
APPLICANT: Barbas III, Carlos F.
APPLICANT: Shabat, Doron
APPLICANT: Larie, Benjamin
APPLICANT: List, Benjamin
APPLICANT: Lerner, Richard A.
TITLE OF INVENTION: PROBRUG ACTIVATION USING CATALYTIC ANTIBODIES
FILE REFERENCE: PLF0011S
CURRENT FILING DATE: 1999-05-25
NUMBER OF SEQ ID NOS: 6
SOFTWARE: PatentIn Ver. 2:1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 FEATURE:

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                  April 22, 2003, 12:48:49; Search time 6.125 Seconds
